

**Human creativity and artificial intelligence (AI) are a transformative combination.**

---

## Mastering change

---

- If we adopt change at an early stage, we can use our intelligence to work with AI and adapt to change.
- ... otherwise we will run after, as with climate change.

## Discover possibilities

---

- Like a bird adjusting its flight route to fly with the wind, we can use our intelligence to adapt to the challenges of change and discover new opportunities.

**Let's shape change together and  
exploit the possibilities of AI.**
